FREE GUIDE · VOICE · 2026

Clone Your Voice with AI

The exact setup and settings behind the AI voice in every reel on my account. Record once, never record again.

record → clone → generate ✎

Vidhya Suthar
@theyellowvidhya · Teaching marketing since 2021

The voice in my **VOICE reel** is this clone. That 45-second script used **656 ElevenLabs credits** (one generation, 24 Nov 2026).

START HERE

Before you start

You need	Details
ElevenLabs account	elevenlabs.io. The free plan does **not** include voice cloning. Instant Voice Clone starts on the **Starter** plan.
A clean recording	ElevenLabs shows **10 sec minimum, 3 min best** for an Instant Voice Clone. Max **10 MB per file**.
Your own voice	Clone only your own voice, or one you have written permission to use.
10 minutes	Recording 3 min + setup 5 min + first test 2 min.

The whole flow

Record 1-3 min → **Voices → Create Voice** → **Instant Voice Clone** → **Upload + name** → **Text to Speech**

Checklist

- [ ] Starter plan (or higher) active
- [ ] Quiet room, no fan, no AC hum
- [ ] Phone or mic 15-20 cm from your mouth
- [ ] One file, one speaker: only you
- [ ] Saved as MP3 under 10 MB

Honest note: plans and prices change often. Check the ElevenLabs pricing page before you pay.

STEP 1

Record your sample

The clone copies **exactly** what it hears: your tone, your speed, and also the noise. A clean sample matters more than an expensive mic.

1. Sit in the quietest room you have. Curtains and a bed help (less echo).
2. Record with your phone's voice recorder, 15-20 cm from your mouth.
3. Speak the way you speak in your reels: same language mix, same energy, **one steady tone**.
4. Aim for 2-3 minutes. Read the script below twice if you run short.

Practice script (read it naturally)

READ THIS

Namaste dosto! Main roz aapke liye simple tips laata hoon, jo aap aaj hi try kar sakte ho. Aaj ki baat bahut simple hai: consistency beats perfection. Ek video daalo, data dekho, aur next video thodi better banao. Agar aapka business hai, to customers ko woh dikhao jo unhe chahiye: price, location, aur result. Questions ho to comment karo, main reply karunga. Milte hain next reel mein!

Do

- ✓ Natural pauses
- ✓ Same mic for the whole file
- ✓ Smile while you talk (it shows)

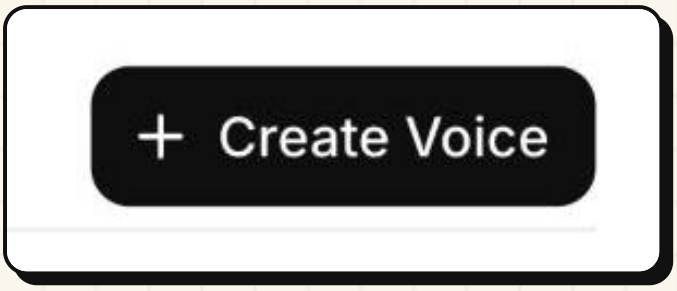
Avoid

- ✗ Background music
- ✗ Echo, fan or traffic noise
- ✗ Shouting, then whispering
- ✗ Another person's voice

STEP 2

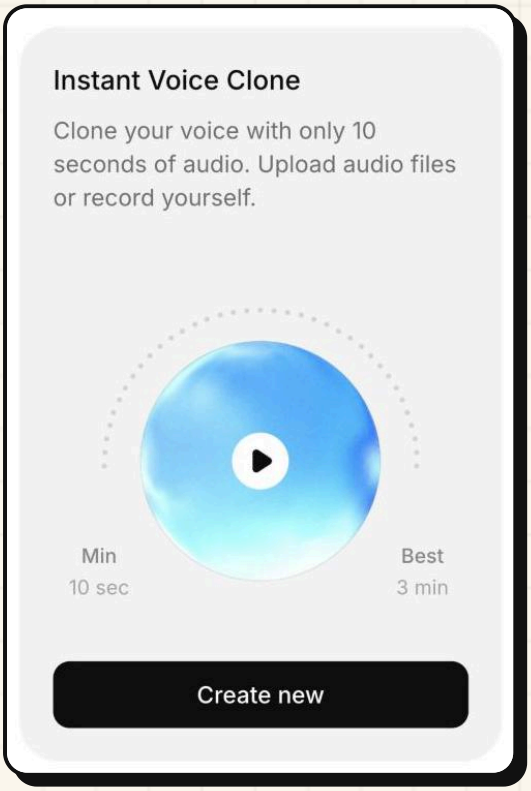
Create the clone

1. Open **Voices** in the left menu and click **+ Create Voice**.



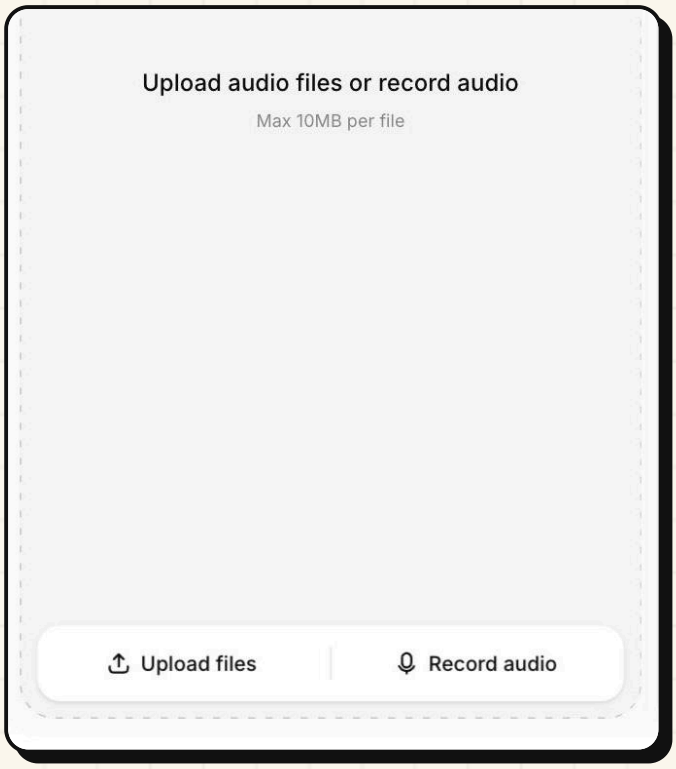
Real screen: Voices → + Create Voice

2. On **Instant Voice Clone**, click **Create new**.



Real screen: min 10 sec, best 3 min

3. Click **Upload files** (or **Record audio**) and add your sample.



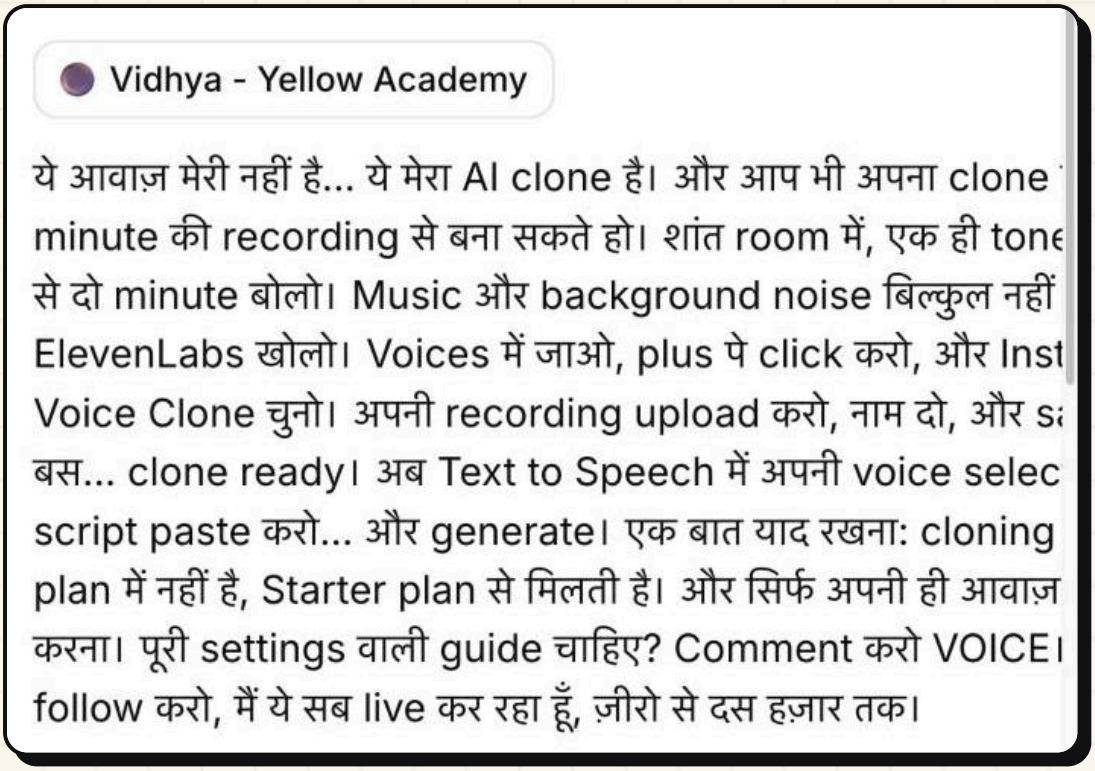
Real screen: upload or record, max 10 MB per file

4. Give it a clear name (I use **"Vidhya - Yellow Academy"**), confirm the consent step, and save.

5. Your clone now appears under **My Voices**.

STEP 3

My exact settings



Real screen: Text to Speech with my clone selected and the full script as one paragraph

Setting	What I use	Why
Model	Eleven v4	The model I use for every reel
Stability	Middle (~50%)	Lower = more expressive, higher = more steady
Similarity	~75%	Close to my voice, still natural
Language	Auto	Handles Hindi + English in one script
Output	MP3 44.1 kHz, 128 kbps	Plenty for Instagram reels

Write the script like this

FORMAT

ये आवाज़ मेरी नहीं है... ये मेरा AI clone है। और आप भी अपना clone सिर्फ एक minute की recording से बना सकते हो।

- ✓ **Hindi words in Hindi script**, English words in English: pronunciation becomes correct.
- ✓ Paste the whole script as **one paragraph**.
- ✓ Use **"..."** for a short pause.

FIX IT

If it doesn't sound right

Problem	Fix
Sounds robotic or flat	Lower Stability a little and generate again.
Changes tone in the middle	Raise Stability a little.
Doesn't sound like you	Record a cleaner, longer sample (closer to 3 min) and make a new clone.
Hindi words pronounced wrong	Write those words in Devanagari, not Roman.
Speaks too fast	Shorter sentences and "..." between ideas.
Noise or hiss in the voice	The sample had noise. Re-record in a quieter room.

Save credits

1. Finalise the script **before** you generate. Every generation costs credits.
2. Read it out loud once yourself. Fix lines you stumble on.
3. Generate once, listen once, download.

Rule: use your clone only for your own content, and say it is AI when the platform asks (Instagram has an "AI label" switch).

Record once.
Never again.

Make your clone today and use it in your next reel.

your voice, on autopilot ✎
